A special lecture in very specific research topics by a renowned scientist in the field. The participants will get insights about the topic. The event is focused such that WHY element of any idea is explained.

The topic will be decided with the availability of the speaker and interests of the participants. We will focus more on the new topics as Artificial Intelligence, Robot Vision, Human Computer Interaction, etc. The talk will be designed such that it is understandable without prior knowledge in the field.

The goal is to make people think, why such systems are expanding or why such methods work the way they work. The participants are left with a thinking point and directions to go deeper.

After the event, there will be a discussion section in which you can meet the speakers. Such an event is a great way to make networks. No rules!

It is a creative technical paper writing competition wherein students will have to present a paper on the given topic.

The topic will be given with suggested sub-areas but will not be limited to it.

The paper is not expected to be consisting of experiments and results but an approach or methodology with proper base and analysis.

The goal is to make a participant do enough literature survey, get thorough with the topic, propose some possible solutions or ideas in the given area. Or it can be a classical survey of the papers and research in the area.

The papers will be judged by a panel of experts in the same area followed by poster presentation by the top 20 contestants.

The winners will be awarded a prize money of \_\_\_ and their papers will be published on a respective website.
